EDUCATION

AAS in Cyber Security
San Diego City College
2025

SKILLS

- Python
- VMWare
- Citrx
- Microsoft Office
- Spreadsheets
- Active Directory
- Cisco Firewalls and switches
- AWS
- Azure

ACHIEVEMENTS

- CDL B
- A+
- Network+
- Security+
- Cloud+
- Linux+
- CySA+
- Ethical Hacking & Pentsting

PROFESSIONAL OVERVIEW

After spending ten years working in the IT field with a Managed and Cloud Service Provider, I gained extensive experience building and maintaining Microsoft enterprise-level infrastructure. During that time, I managed large-scale system deployments, network configurations, and server environments that supported hundreds of users. My work involved troubleshooting complex issues, improving system performance, and ensuring up time for business-critical applications. As technology and security threats continued to evolve, realizing the importance of staying current with new advancements in cybersecurity. To strengthen my knowledge, I decided to return to school to update my certifications and expand my understanding of modern security practices. I focused on learning about network defense, data protection, and risk management to complement my existing technical skills. This return to education has helped me bridge the gap between traditional IT operations and today's growing cybersecurity challenges.

WORK EXPERIENCE

Bus Operator / Driver – CDL-B

MTS San Diego – San Diego, CA

February 2022 to October 2022

Operate 40-foot and 60-foot city buses throughout San Diego, CA, ensuring safe and efficient transportation for passengers. Conduct pre-trip and post-trip vehicle inspections to maintain compliance and safety standards. Provide courteous customer service, assist passengers as needed, and maintain on-time performance along assigned routes. Demonstrate strong knowledge of city streets, transit procedures, and defensive driving techniques.

Systems / Network Administrator

Approach Technology – Seattle, WA

December 2010 to October 2019

Systems/Network Administrator - Install, configure, and maintain physical and virtual systems including servers, switches, and printers, both legacy and modern. Perform software updates, user account management, and system monitoring to ensure network stability and data integrity. Provide technical support through help desk operations, resolving hardware and software issues promptly. Collaborate with team members to improve system performance and streamline IT operations.

Sous Chef

National Geographic, Seattle WA.

April 2010 to June 2010

Prepare and serve high-quality meals for guests and crew aboard a small expedition vessel, with an emphasis on baking and pastries. Assist in menu planning, food preparation, and daily galley operations in a compact and fast-paced environment. Ensure proper food handling, storage, and sanitation practices at all times. Support the head chef in maintaining consistent quality and presentation standards for all meals.
